NAME

CURLOPT_FILETIME – get the modification time of the remote resource

SYNOPSIS

#include <curl/curl.h>

CURLcode curl_easy_setopt(CURL *handle, CURLOPT_FILETIME, long gettime);

DESCRIPTION

Pass a long. If it is 1, libcurl will attempt to get the modification time of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command. The *curl_easy_getinfo(3)* function with the *CURLINFO_FILETIME(3)* argument can be used after a transfer to extract the received time (if any).

DEFAULT

0

PROTOCOLS

HTTP, FTP, SFTP, FILE

EXAMPLE

TODO
